

EarthChoice® Products

Material Resources

PLA (Polylactic Acid)

PLA is a natural plastic material called Ingeo™ which is made from plants instead of oil. It is 100% annually renewable. Because PLA is a natural material, it is best used for cold applications and has a heat tolerance of 105° F. All Pactiv PLA products are **ASTM D 6400** certified and compostable in commercial facilities only, which may not exist in all areas. Not suited for home composting.

PLA Coated Paper Hot Cups & Soup Cups

Polylactic Acid Coated Paper is used for Pactiv's compostable hot cups and soup cups. While PLA is used for cold applications, when the PLA film is applied to paper such as our hot cups and soup cups, the PLA film takes on the properties of the paper and therefore does not melt or deform. Pactiv's PLA Lined/Coated Paper Cups are made from 100% annually renewable resources and is **ASTM D 6868** certified, compostable and chlorine free in commercial facilities only, which may not exist in all areas.* Not suited for home composting.

Fiber Blend Hingeware

Pactiv's Fiber Blend Hingeware is made of a blend of pulp fibers. All the materials in the Fiber Blend Hingeware are made from sustainable, renewable resources and are **ASTM D 6868** certified, compostable, and processed chlorine free in commercial facilities only, which may not exist in all areas.* Not suited for home composting.*

Bagasse Blend Tableware

The Bagasse Blend Tableware is a fiber (paper) material that is made of a blend of Bagasse (Sugar Cane) and Bamboo which are sustainable and annually renewable resources. Pactiv's Bagasse Blend Tableware is **ASTM D 6868** certified and compostable in commercial facilities only, which may not exist in all areas.* Not suited for home composting.*

PSM (Plastarch Material)

PSM is manufactured from starch and a blend of several other materials. The base material comes from a starch that is modified in order to obtain heat resistant properties. Since PSM is derived from corn, which is an annually renewable resource, this material can handle temperatures up to 200° F making it perfect for higher heat applications.

TFPP (Talc-Filled Polypropylene) - TFPP contains an average of 40% less plastic polymers than standard polypropylene containers which reduces plastic usage. This product is recyclable in the few communities that have appropriate recycling programs.

Recycled PET (Recycled Polyethylene Terephthalate) - PET is made primarily from natural gas feedstock, whereas RPET is produced from previously used post consumer/post industrial plastic products. Pactiv uses a minimum of 25% recycled content in RPET packaging. This product is recyclable in the few communities that have appropriate recycling programs.

*Disposable compostable products are recommended only for industrial or municipal compost facilities. For a complete list of facilities near you visit www.findacomposter.com
