Beating Our Carbon20 Target

We achieved our Carbon20 targets-eight years early! We want to make a meaningful contribution to mitigating climate change and we recognize this means taking action to reduce our products' carbon dioxide emissions across the entire lifecycle well beyond our own operations.

The diagram above shows that by far the largest emissions come when consumers use our products, while raw materials also make a significant contribution. So we take a lifecycle management approach, aiming to reduce emissions right across the product lifecycle through our Carbon20 program.

The aim is to decouple business growth from our products' impacts so that our business will grow at a faster rate than our emissions. At the same time, our Trees for Change program helps to effectively offset the emissions from our manufacturing sites. Our ambitious target was to reduce our products' total carbon footprint – from raw materials to use and disposal – by 20% per Dose* by 2020, compared to 2007. This is an average reduction of 1.5% per Dose each year.

We have exceeded our 2020 target, with a 21% reduction in carbon emissions per Dose (excluding our SSL business). When the recently acquired SSL business is included this rises to 26%.

Greenhouse gas emissions from the Total Carbon Footprint of RB's global products, per Dose

Grams of CO² equivalents

What is it?

A project to plant enough trees on previously deforested land in British Columbia, Canada, to offset the greenhouse gas emissions from RB's manufacturing facilities between 2006 and 2011.

Why?

So that the manufacturing of approximately 30 billion products over the six years will effectively have been carbon neutral.

How does it work?

The newly planted trees take in carbon dioxide and will remove the same amount of carbon from the atmosphere as our manufacturing has produced in the six-year period. They will offset approximately 2 million tons of CO₂ over the life time of the trees.

How many have you planted?

More than 865,000 in 2001, bringing the total to 5.4 million.

What next?

We'll keep planting until 2015, when we will have reached more than 6 million trees. Then we will carry out maintenance to ensure the trees remain strong and healthy for the next 80+ years.

*A Dose is the amount of each product required to deliver the intended service, i.e. one Finish automatic dishwashing tablet for one dishwashing load. The number of Doses per year is not comparable to other measures of sales or production volume.
